ABOUT ME

Results-driven and innovative IT professional with a strong background in server, network, and security technologies. Known for implementing cutting-edge solutions to maximize business continuity, efficiency, and security. Skilled in both front-end and back-end development, creating exceptional user experiences. Passionate about driving technological advancements and delivering impactful results. Committed to fostering collaboration and leveraging cross-functional expertise to achieve organizational goals.

EXPERIENCE

IT MANAGER
Kā'anapali Beach Hotel / Lāhāina, HI / 2013 - Present

Serves as the information Technology (IT) leader for Hawai'i's most Hawaiian Hotel; responsible for developing and executing short-term and long-term technology plans and goals..

- ❖ Architect, implement, and manage redundant/highly available systems, disaster recovery and backup solutions, and information security control structures to ensure seamless operations and prevent data loss.
- ❖ Optimize, secure, and oversee the entire data center and network infrastructure to achieve exceptional performance, reliability, and data integrity.
- ❖ Plans, designs, manages, installs, troubleshoots, and repairs enterprise software, hardware and network systems and technologies.
- ❖ Develop and enforce industry-leading standards, standard operating procedures, and documentation to streamline operations and ensure adherence to best practices.
- ❖ Effectively manage multiple concurrent IT projects through strategic planning, prioritization, and coordination to meet deadlines and deliver successful outcomes.

WEB APPLICATION DEVELOPER
Research Corporation at the University of Hawaii / Remotely / 2012 - Present

Skilled and pragmatic full-stack programmer, experienced in providing web application development using the Microsoft ASP.NET framework.

- ❖ Drive the design, development, and management of multiple responsive web applications and relational databases for the Hawai'i Invasive Species Council, serving a broad user base.
- ❖ Optimize application performance and scalability through advanced client-side scripting and LINQ to SQL compiled queries, resulting in remarkable user experiences and increased engagement.
- ❖ Enhance product user interface and functionalities through innovative design concepts and usability enhancements, leading to improved user satisfaction and adoption rates.
- ❖ Administer SQL Server back-end, leveraging advanced SQL functions and stored procedures to enable efficient data computations and drive data-driven decision-making.
